OBJECTIVES

Of the Jobs Study

• Clarify the jobs issue

• Analyze the impact of legal minimum wage (MW) the welfare of the common tao and the disadvantaged

• Find ways to make labor regulations and practices work for the poor, jobless and disadvantaged
Structure of Presentation

• Highlights key findings and recommendations of the study

• Flow of presentation
  – Context in stylized facts
  – Summary of the evidence on MW effects
  – Conclusions and recommendations
OVERVIEW OF

Jobs-Poverty Nexus

- real wage + surplus labor = high persistent poverty

- Central issue = jobless + underproductive workers
Open unemployment is only a small proportion of the underproductive workers.
Caveat

be careful about the interpretation of open unemployment

• The *openly unemployed* are generally *not* the poor.

• *Positive correlation* of open unemployment with income and education

• *Lack of relationship* with growth, probably due to statistic noise and more search unemployment due to income rise
Usual Interventions

ADDRESS JOBS AND POVERTY ISSUE

• **Minimum wages** and other labor protection regulations

• General *productivity increase*

• Investment in *human capital* (education, nutrition and training)

• *Livelihood programs*

How effective are these interventions?
OBJECTIVES OF REGULATIONS

- protect labor against abuses of employers
- increase the bargaining power of labor for decent wages and working conditions

REGULATIONS AND PRACTICES

- MINIMUM WAGES and other mandatory benefits (e.g. severance pay and 13th month pay)
- Six-month regularization law
- Inflexibilities in hiring and firing workers
More labor regulations and practices:

- Costly, inconvenient and long conflict resolution processes
- Tripartism, inadequate representation of the poor, disadvantaged, and unorganized labor
- Confusing regulations and biased jurisprudence

Potentially, labor regulations can have positive or negative effects

- On balance, what currently is their net impact on welfare of common man and the disadvantaged?
The case of the MW:

Evidence on its Effectiveness

- Generally, not only unhelpful but *highly detrimental* to the welfare of the common man and the disadvantaged

- Clear and preponderant evidence from impact studies on
  - Household income and poverty incidence, using APIS panel data
  - Employment of enterprises (Survey of Enterprises)
  - Employment of individual workers from disadvantaged population groups (LFS)
  - Hours of work (LFS)
Minimum wage reduces demand for labor for all enterprise, particularly, small ones

Household Welfare

Results for a DID analysis:

**Faster** rise in MW results in:

- **Lower** household income
- 20 percent reduction in average household income relative to counterfactual

Notes:

a/ NAMW = Non-agricultural daily minimum wage rate; AMW = agricultural daily minimum wage rate
b/ In constant 2000 prices without controls. The estimate with controls is not too different at 1,717 for non-agriculture and 1,501 for agriculture wages. In the case of probability of falling into poverty its 0.04 for non-agriculture and 0.026 for agriculture wages.

Notes

“Difference,” is the simple difference computed from subtracting treatment-comparison. This is to not confuse the reader from other values which is actually a “Difference-in-Difference.”
Impact of Minimum Wage

Household Welfare

Results for a DID analysis:

**Faster** rise in MW results in:

- Higher probability of falling into poverty
- Significant increase in poverty incidence rate by 1.7 to 3 percentage points

Notes

"Difference," is the simple difference computed from subtracting treatment-comparison. This is to not confuse the reader from other values which is actually a “Difference-in-Difference.”
Why would household income decline with a higher minimum wage on average?

Minimum wage lowers the average proportion of working-age family members who will be hired

Minimum wage lower the average work hours per working-age family member
Effects of Minimum Wage Increase on Employment Outcome Using Regression Discontinuity Design*

The minimum wage increase in 2007:

Reduced weekly work hours by 2.7 hours

Decreased probability of retaining or gaining employment by 8% to 22%

• Kristine Laura Canales (2013) Unpublished Master’s Thesis UP School of Statistics (Adviser: Dr. Dennis Mapa)
• Data: LFS panel July 2007 and July 2008
Effectiveness of Labor Productivity Increase

- **Significant** and substantial *negative impact* unemployment and underemployment

- **No direct effect** on real wages

- **Consistent** with economic models with *excess supply of labor*

- Used *frequency of typhoons* as instrumental variables
# Impact of General Productivity on Employment

**Positive** relationship between productivity and employment

**Negative** relationship between productivity and underemployment

- **Country has surplus labor**

**Notes:**
1/ Statistically at 1% significant level
2/ Productivity data taken from the Bureau of Labor and Employment Statistics website and employment and unemployment rate for Labor Force Surveys.
3/ Fixed effects model, using frequency of regional typhoons as instrumental variable for labor productivity.
4/ Authors’ estimate using IV and frequency of typhoons as IV to productivity
The rate of return to investment in education is relatively high (Paqueo, Orbeta, Castaneda and Spohr 2013):

- income of households headed by high school graduates is more than double that of households with only elementary education,
- taking to account differentials in both daily wage rate and hours of work

Rising wage premium for educated labor (Di Gropello et al. 2010)

Improved nutrition has a positive effect on wages of agricultural workers (Haddad and Bouis 1991)

Mixed effects of training programs (J-PAL, 2013; Betcherman et al, 2004) and low percentage of training done on-the-job and in-plant (less than 10%)
Label: Jobs Expansion and Development Initiative (JEDI) for poverty alleviation

TWO BROAD OBJECTIVES:

– Expand gainful jobs through the acceleration of labor intensive production, particularly, manufacturing of tradable commodities

– Improve investments in education and other human capital development and sustain total productivity gains
JEDI’s Predicates

- **Clear and preponderant evidence** of the *deleterious impact of minimum wage* on employment, income and poverty status of households, particularly those belonging to the disadvantageous population groups.

- The **aspiration for secure jobs with decent wages is well recognized** but *challenges the idea* that the minimum wages and other current labor regulations should be the weapons of choice.
  - **Better alternatives** are education, increased labor intensive manufacturing and greater opportunities for training on the job.
  - Helping the poor *directly with their subsistence needs* – e.g., direct and temporary income subsidy.

Time to leave the beaten path and try new approaches.
Labor Reforms and the 12-point JEDI Program

1. Instituting measures that would minimize the imposition of labor regulations and practices detrimental to and discriminatory against the poor and other disadvantaged population;

2. Allowing firms to hire low skilled and poor workers who want to voluntarily opt out of the mandatory minimum wage norm, recognizing that it hurts rather than helps them; ensure, though, that workers’ acceptance of the offers is voluntary and well informed.
3. Adapting and experimenting with a *Singaporean style scheme* providing *income supplement to targeted ultra poor workers* to close the gap between market wage and decent wage norm society wants
   – if conformity to the norm is deemed a public good, the use of general tax revenues (following public finance principles) would be better than mandating high minimum wage that perversely penalize labor-intensive firms.

4. Transforming the consultation process from a *tripartite into a quadripartite system* that would give the poor, unemployed, underemployed and self-employed *direct representation* in the determination of labor regulations and policies;
5. Encouraging labor unions to focus on *raising the competencies and productivity of workers* as a means to achieving decent wages;

6. Lengthening from *six months to two years the compulsory regularization of young workers* to expand their learning experience and build their skills on the job;
7. *Simplifying labor dispute resolution processes* to cut the time, cost, inconvenience, and uncertainty involved;

8. Making the rules on hiring and firing decisions *more flexible*, leaving the firms and workers to negotiate and work out agreements that are mutually beneficial;
9. Accelerating the accumulation of skills

Ensuring *quality implementation of the K-12 reform*; undertaking institutional reform of TESDA as articulated in the 2011 *Economic Policy Monitor* of PIDS; and pursuing ongoing CHED initiatives like the UNIFAST aimed at improving access to quality higher education and the production of good research;

10. Implementing the *extension of demand-side education assistance of Pantawid Pamilya* to high school students and complementing it with policies and programs that facilitate on-the-job training and employment in private enterprises;
11. Promoting research and development activities in support of this proposed 12-point program, including piloting and testing of innovative approaches; and

12. Facilitating the emergence of a well-organized coalition of stakeholders devoted to finding and promoting approaches that effectively advance the interest of poor workers now being excluded from gainful job opportunities.
